January 16th

October 31st

January 9th

Date

- Traumatic Dental emergencies
- Dentistry
- Suicidal patient:
- Best way to help a victim?

Domestic Violence

Case series focused on general approach, assessment, management and disposition of:

1. Malignant hypertension
2. Secondary Adrenal insufficiency
3. Mandibular dislocation
4. Common deferential diagnosis (with their clinical characteristics, pathophysiology, clinical presentation, DDx, complications, management & disposition)

5. Tumor Lysis Syndrome
6. Pulmonary Stenosis/Regurge

Pericardial diseases & Tachyarrhythmia

Hemostasis

Hemostasis Disorders

HIV pts)

Transfusion-Related Acute Lung

Bronchial Asthma

Acid/Base

Basics of acid-base equilibrium

Patient Doctor inter-relations

Acute management

Displacement

Pain Control

Non-Opioid Analgesics: caution + contraindications + adverse approaching)

Well's criteria)

Identifying the reason for

(Antiphospholipid Syndrome, Drug-SLE vs infection)

4. Neurologic / vasovagal / Tachyarrhythmia

1. Syncope vs other DDx
2. Cardiogenic

Diagnosis + ECG / Echo findings + PE +Ruling IN PE (diagnostic tools)

PE

Resuscitation

Brain Resuscitation

Pathophysiology & Types (Focusing on hereditary and ACE-induced)

Angioedema

Pulmonary

Main Objectives

1. How to manage a diagnosed DVT

2nd Presenter:

3-Circulatory Overload.
1-Extravascular Hemolytic
2-Transfusion

Anemias

(mention indications to treat)

Case Series:

1. Aortic Dissection

2nd Presenter:

2 Cases addressing pathophysiology, clinical features, management and disposition:

1. Aortic stenosis/regurge
2. Pulled tube

1st Presenter

1st Presenter

2. Pericardial diseases & Tachyarrhythmia

3. Hypervolemic elderly & low Na

4. Neurologic / vasovagal / Tachyarrhythmia

1. Syncope vs other DDx
2. Cardiogenic

Diagnosis + ECG / Echo findings + PE +Ruling IN PE (diagnostic tools)

PE

Resuscitation

Brain Resuscitation

Pathophysiology & Types (Focusing on hereditary and ACE-induced)
